

## ABOUT COFFEY ENVIRONMENTS

Specialist knowledge can transform environmental, social and safety expenditure into investment throughout the project lifecycle.

Coffey Environments partners with clients to deliver life-of-project specialist environmental, social and safety performance solutions in the infrastructure, resource, energy, government and property sectors. We become involved in projects at the early stage of feasibility, providing strategic advice, management of the approvals and permitting process, stakeholder engagement and technical investigations, such as marine, ecology, hydrology and energy modelling.

Our involvement continues throughout the project, providing environmental management, occupational health and safety, waste management and energy monitoring during construction and operations. At the end of a project we provide contaminated site assessment and remediation, which effectively begins the project life cycle again as remediated sites are suitable for new land use.

Our projects are supported throughout by our expertise in geographic information systems and our project management skills which we bring to each project.

### Sectors

- Infrastructure
- Property
- Resources
- Government

### Services

- Occupational health and safety
- GIS and spatial data management
- Pollution, waste and remediation
- Environmental, design and management
- Energy and water management
- Planning and approvals
- Social and environmental performance
